

Type of data
Data can be categorised
based on nature & characteristics

Types:
- Qualitative data - descriptive
Non-Numerical
- Quantitative data - Numerical
Measurable.
- Discrete data - Countable,
Whole numbers.
- Ordinal data - ordered
Categories eg. - rankings.

Formats of data:
Data can be stored and
represented in different
formats.
Unstructured data - No fixed
format eg. - text, image

Facets of data
Understanding the
different dimensions, indecis

Exploring the nature, variety and significance of
data in decision making, analytics and real world.

Sources of data: Data is
collected from various
origins and channels

Sources:
- Internal sources: within an
organization
- External sources: outside
the organization.
- Primary data - collected
firsthand for a specific purpose
- Already collected by someone

Quality of data
The usefulness of data depends
on its quality

- Accuracy - correct and
errors free.
- Completeness - No important
data is missing
- Consistency - uniform across
system and time.
- Validity - conforms to defined
rules and formats.

*** Summary:** The facets of data - its types, sources, formats, quality and value work together
across the data lifecycle to drive insights, support decision and create impact.
